

Home Appliances

Pacific Home & Appliance Distribution

CONDO CHALLENGE:

Constricting layouts and venting requirements can be difficult for condo owners to navigate when updating major appliances. “Most condos are not able to accommodate vented hoods or dryers,” explains Lianne Cameron of Pacific Home and Appliance Distribution. “Cooking hoods need to be recirculating, as well as condensation or heat pump dryers for laundry.”

CONDO SOLUTION:

Embrace technology with sleek and efficient multifunctional appliances. “Bosh’s compact laundry [machines] and Fisher & Paykel’s dish drawers are condo favorites,” notes Cameron. “Both manufacturers also offer compact 24-inch wall ovens and cooktops to elevate any kitchen space.” Local condo owners are especially loving the GE Profile All-in-One Laundry unit, a game-changing appliance which cleans and dries laundry in one exceptional machine. Featuring ventless heat pump technology at full-size capacity, this single appliance eliminates laundry transfers and frees up valuable living space.

Top 3 Tips for Condo Appliances:

1. Measure carefully. Ensure precise measurements when mapping out where appliances will be installed, and keep tabs on specs for delivery through doorways and hallways.
2. Look for multifunctionality. Choose appliances that offer a variety of features in one innovative unit, such as washer-dryer combos or hybrid microwave-convection ovens.
3. Prioritize energy efficiency. Select energy-efficient models that will help you save on utility costs and reduce your environmental impact.
